

Newfield Air Quality Plan

Elevate Regulatory Compliance

- Collaborate with operations to execute air permit and reporting requirements
- Develop or revise processes for compliance with new regulations
- Execute procedures for current compliance obligations including:
 - Engine emissions testing
 - NSPS reporting
 - EPA GHG inventory reports
 - State-mandated emission inventories
- Execute internal compliance audits to enhance performance

Continually Improve Processes and Advance Skills

- Implement processes to deliver top-tier compliance performance
- Expand environmental compliance system to deliver critical capabilities
 - Extend emission inventory process across operations
 - Deliver production limit notifications
 - Continue site visits to validate internal tracking mechanisms
 - Align LDAR program with the Environmental Partnership
 - Enhance data dashboards to monitor emissions and survey results
 - Manage compliance data
- Develop air quality metrics and internal key performance indicators

Participate in Advocacy

- Actively engage in advocacy with EPA, Tribal representatives, county commissioners, state environmental departments, governors' offices and congressional representatives
- Promote efforts to ensure long-term regulatory operational certainty

Promote Corporate Responsibility

- Utilize corporate responsibility process to convey air quality performance and approach
- Engage in proactive initiatives and collaborate on best practices with the Environmental Partnership

Engage with Workforce

- Promote understanding of air quality compliance and stewardship
- Provide tailored air quality training for operations and engineering
- Communicate with management and operations on key air quality issues and new environmental policies
